The problem is that sometimes the dates are imprecise. For example, if I search for monday of January 1, then the output is something like 2 Jan 2007, instead of 1 Jan 2007. Similarly for other dates as well (for monday of june 12, I get monday of June 11,2007). Is there a way to achieve what I am looking for? I have no control over the server side so I can't use library like PHPExcel Any suggestions would be much appreciated. A: There's no way in PHP to do a fuzzy date search. You could, of course, try to find a library that'll help you do it, but if it's a hard problem, it's best left to programming languages where the syntax for defining dates is explicit. Tag: Amazon Prime Video Amazon has started to stream a few episodes of its kids TV series Roar before it airs in the UK. If you haven't seen it yet you're missing out so go watch it! The show follows a group of lucky puppies in a tough city life who have to live by their wits. Watching the YouTube trailers I saw that some of the characters were also available as Alexa. You can choose to watch the Roar episodes on a Bluetooth speaker, cast them to your device, read them aloud and enjoy them on the big screen. Amazon's latest gadget is the Echo Studio. It's another device designed to enable voice control of Amazon services. Like the Echo, the Studio has a digital assistant built-in, allowing you to ask Alexa to play

What's New in the Kramer 840HXL Controller?

The beauty of Kramer 831HXL is that it facilitates project presentations for example, therefore you have to have a monitor that is capable of handling the bandwidth of HDMI. In other words, HDMI 1.4 supports the maximum graphics formats of 4K, 3D, VR and DisplayPort. This means that the new technology offers you excellent performance, especially when you need to handle streaming videos such as those of 4K UHD or higher. Here, you need to know that the device boasts a number of advantages that make it useful for corporate and educational use. What's more, the Kramer 831HXL is compatible with various resolutions, resolutions, up to 4K Ultra HD. Therefore you can even find yourself moving towards 4K, but first you need to find yourself in a position to acquire the latest technology. With that in mind, one of the best choices for a 1080p test pattern generator is the 831HXL. Such a device is a great choice for those who seek a multifunctional HDMI test pattern generator. As the name suggests, it is a unit that will help you test and adjust projects, flat panel LCD displays and DVI cables. In other words, the unit acts as a video test pattern generator that can help you determine whether the displays work properly and help you determine the optimal settings. The device comes with 32 preset patterns and 7 user-defined HD resolution, some of which featuring motion profiles, so that you can adequately verify the HDMI signal path. As the name suggests, Kramer 831HXL Controller is an application that enables you to manage the video test pattern generator as well as the user-define resolutions better. To be more precise, the utility permits you to define more accurate specifications associated with the resolution, patterns and output settings details. The program works with several common resolutions, such as VGA, XGA, SVGA as well as HD 1080, for instance. Then again, you should keep in mind that you can also opt for the native output resolution. Among the patterns that you can test the HDMI signal path with you can count the Grey Bar 8-step and 16-step, Crosshatch black, red, green and blue, bounce, target circle, while HScroll and VScroll, Blue Ramp, Multiburst, White Dot, Square and Moving Ball, just to name a few. The Kramer 831HXL Controller provides you with details about the status of the connected display and the status of the output. In
